

Sloan's New Graywater System

Featuring AQUUS™ Technology

Introducing the Sloan Graywater System

Sloan's system uses the graywater from bathroom drains to flush toilets. The Sloan graywater system:

- Disinfects and filters water
- Contributes to points for LEED® certification
- Saves thousands of gallons of water annually

Sloan's graywater system stores water that would normally go down the drain and routes it through a sanitizing device to a storage reservoir under the sink (see illustration). Upon toilet flush, the system pumps water from the storage reservoir to the flush tank.
