

## Tactical Light and Power Solutions for Soldiers and First-Responders

This year, Energizer is introducing two new products to its **Energizer® Hard Case® Tactical™** line of lights: The new *Energizer® Hard Case® Tactical™ 2AA Second Generation Handheld Light* and the new *Energizer® Hard Case® Tactical™ Helmet Light*

- Both of these lights are virtually indestructible and are designed to attach securely to tactical gear
- Each product has multiple light modes, including applications for light discipline, medical, night vision devices and Identify Friend or Foe (IFF)
- Both lights operate on AA batteries, a more accessible format than the commonly used CR123 cell batteries

**Energizer® Ultimate Lithium** AA and AAA batteries provide maximum runtime for *Energizer® Hard Case® Tactical™* lights and other high tech high-drain field devices such as walkie talkies. *Energizer® Ultimate Lithium* batteries are 33 percent lighter than ordinary alkaline batteries and perform in extreme temperatures, making them reliable no matter where the mission leads.
